

Paul

Fan heater

Stadler Form®

SWISS DESIGN SINCE 1998

PAUL heats sensitively and quietly!

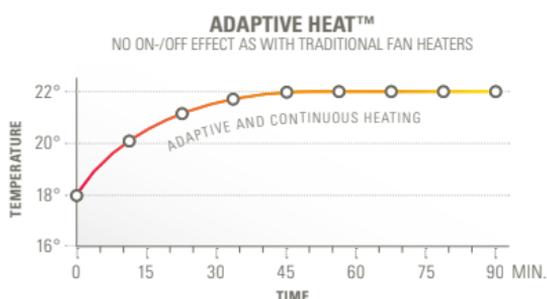

Touch panel: adjustable heat output and selectable temperature

2 in 1 heating and cooling, with swing mode

Remote control and washable particle filter

ADAPTIVE HEAT™ technology automatically adapts heat output in auto mode to reach and keep the desired temperature in an efficient way

A powerful guy, this Paul! But his unique Adaptive Heat™ technology makes him more sensitive than any other. In auto mode, he automatically adapts the heat output to maintain the desired degree of heat – no annoying on-off fluctuations; just soft maintenance of the temperature: gentle, quiet and dynamic (swing mode). You can precisely adjust the desired temperature using the easy-to-operate touch panel and, with the remote control, you can even adjust this from the comfort of the couch. Paul does not shy away from moist environments either – he is suitable for use in the bathroom! His washable air filter makes him quite a clean guy and the perfect roommate.
